CozyTools

Solana NFT Manager

📅 2022-2023

- Developed a command-line interface (CLI) tool to manage Solana-based NFTs, integrating various tools to streamline the process of buying, selling, and transferring NFTs on the Solana blockchain. The project was written entirely in Python and utilized Solana's Python SDK for blockchain interactions.
- NFT Lister: A tool to list NFTs on the Solana blockchain for sale or transfer, including options to set pricing, royalties, and other parameters.
- Market Analyzer: A tool to analyze the NFT market on Solana, including trends in pricing, sales volume, and other metrics.
- NFT Purchaser: A tool to purchase NFTs from the Solana marketplace or from specified addresses.
- NFT Listing Updater: A tool to update existing NFT listings with new pricing or parameters.
- Blockchain Connection Tester: A tool to test and verify connectivity to the Solana blockchain network.
- Cryptocurrency Transfer: A tool to transfer cryptocurrency (SOL or SPL tokens) between Solana wallets.
- NFT Transfer: A tool to transfer NFTs between Solana wallets.
